

SOCIALLY RELEVANT SCIENCE:

Recruiting the

NEXT GENERATION

of California Public Health Laboratory Directors

LabAspire, an

OUTREACH PROGRAM

to recruit a qualified public health laboratory workforce, is a collaboration of UC Davis, Cal Berkeley, UCLA, the California Department of Public Health, and the California Association of Public Health Laboratory Directors.

ARE YOU READY

to become a public health laboratory director? California's public health laboratories are committed to recruiting the next generation of qualified leaders.

California's public health laboratories offer significant career opportunities for directors with *vision* who will connect with their *community* and lead with *courage*.

DO YOU HAVE A

VISION

FOR THE FUTURE OF CALIFORNIA'S PUBLIC HEALTH LABORATORIES?

"Business" is no longer "usual" in California's public health laboratories. Profound and challenging changes are occurring as we adapt to globalization and the threat of bioterrorism. California must learn from the past to prepare for the future,

LEADERSHIP

For California's public health laboratories to continue to become more nimble and responsive, leadership is essential. Visionary directors do more than manage well-functioning laboratories. A forward-thinking leader also fosters open discussion in an environment where new ideas are encouraged.

COMMUNITY

Public health laboratories provide surveillance of many different organisms, helping to protect and serve the whole community. As the primary public-facing representative and leader of the laboratory, it is the director's role to see that this mission is fulfilled.

COURAGE

Every day, laboratory directors call on their ability to confront uncertainty. In a state as varied as California, leading a public health laboratory requires the courage to take risks, experiment with new technologies, and operate with compassion.

Your Next Step

Do you have the vision, leadership, sense of community, and courage to join the next generation of leaders in California's public health laboratories? Can you help us meet the challenge of balancing our state's exceedingly diverse priorities?
